

AIMS CAMEROON/2024-2025

Deep Learning : Methods and Algorithms Assignment n° 2

Exercise 1: The data source

<https://www.kaggle.com/c/dogs-vs-cats-redux-kernels-edition/data>

contains images of cats and dogs. The goal of this assignment is to use a CNN model to classify these images according to the type of animal they represent. More specifically, you are required to develop a high-performing CNN model and submit the corresponding notebook, clearly showing the network architecture, the pre-processing operations, the distribution of the data used for learning, testing and possibly validation, the regularization techniques used, the values of the hyper-parameters used to obtain the best model and the performances of this model. Include any further comments that would aid in understanding your model.
